

MUHAMMED MUBASHIR K

Flutter Developer | Mobile & POS Applications

Kerala, India | +91 8089433955 | muhammedmubashir720@gmail.com

Portfolio | GitHub | LinkedIn

Professional Summary

Flutter developer with production experience building POS, customer ordering, and delivery applications using Dart, Provider, and REST APIs. Delivered cash-management workflows, payment integrations, bilingual printing, and API optimizations, with regression tests for pricing and stock handling. Promoted to Junior Application Developer after three months at ENKE Consulting.

Technical Skills

Flutter and Dart: Provider, ChangeNotifier, setState, reusable widgets, responsive layouts

Integrations: REST APIs, JSON, Razorpay, Stripe, Google Maps, push notifications, receipt printing, RTL

Web Development: React, Next.js, JavaScript, TypeScript, Tailwind CSS

Engineering Tools: Git, GitHub, Postman, VS Code, SQLite, SharedPreferences

Work Experience

ENKE Consulting Services LLP | Apr 2026 - Present

Junior Application Developer | Jul 2026 - Present

- Delivered production Flutter features across POS and logistics applications; diagnosed API edge cases, authentication failures, and Android and iOS release issues.

Full Stack Developer Trainee | Apr 2026 - Jul 2026

- Integrated REST APIs and built reusable Flutter interfaces; contributed React and Next.js commerce features and collaborated with backend developers on API issues.

Selected Projects

EPOSMOB | Retail POS and Inventory | Flutter, Provider

- Built shift-opening and Day Close workflows with cash-denomination calculations and pending-close alerts; implemented purchase-return screens using Provider and REST APIs.
- Fixed English/Arabic invoice rendering and USB printing; corrected barcode pricing and variant-specific stock selection, adding regression tests for pricing fallbacks and stock isolation.

EPOSMOB case study

Ganvin Customer | Delivery Booking and Tracking | Flutter, Provider

- Integrated Razorpay checkout and corrected payment status messaging so customers see a confirming state before success; improved cart responsiveness and authentication navigation.
- Reduced My Orders API calls from six to two by reusing responses for lists and counts; added optional and mandatory app-update prompts and maintenance handling.

Ganvin Executive | Staff Pickup and Delivery App | Flutter, setState

- Implemented independent pagination and API date filters across four pickup/delivery stages; integrated Google Maps and saved locations for staff navigation.
- Replaced six OTP fields with one validated input; fixed null-response OTP failures and endless loading on empty/error list responses, and kept Verify controls visible for long item names.

Ganvin Executive case study

Education

Bachelor of Computer Applications | 2023 - 2026

Priyadarshini Arts and Science College, Melmuri, Malappuram | University of Calicut
